Examiner's signature, if required

Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant refer to 3 steps of claim 1; and asked for clarification of how the cited portions of Brodersen read on those step limitations. Examiner has pointed that the missing part for which Brodersen is used as to remedying the Tahara's reference lies in the replacing of variables found when viewing authoring files, and the looking into files has been suggested in Tahara already. Applicant disagreed on Brodersen's disclosing of those 3 steps but Examiner noted that the rejection is based on obviousness and thus individual references would not cover 100% of the limitations. Applicant pointed out that Tahara does not teach a authoring tool but Examiner rebutted that the claim is broad enough that Tahara's teaching still applies. Examiner has pointed out that Brodersen also teaches selecting of files and processing to replace some variables in the process of authoring and layout audio/viedo data as required from the claimed steps (which Applicant qualifies as dynamic and inventive over the static/conventional method of Brodersen). Examiner also indicated the fact of replacing a tagged variables in a markup document in view of the teachings by Tahara or well-known concepts available at the time of the invention would be a feature Applicant should consider should any amendment be effected to overcome rejection by obviousness.
